<b>Communication</b>	This EPD can be used for business-to-consumer (B2C) communication.			
<b>Comparability</b>	EPD of construction products may not be comparable if they do not comply with EN 15804			
<b>Geographical Area</b>	The product is produced in Jiangyin, Jiangsu, China, the market place is worldwide.			
<b>Life Cycle Assessment (LCA)-method Cut-off Classification</b>	Complies with EN 15804+A2:2019			
<b>Characterisation Factors Version</b>	EF Reference Package 3.1			
<b>Electricity mix</b>	Consumption mix			

**2 Product Information – Product Specific EPD**

Figure 1 Structural steel hollow sections

Figure 2 Structural steel built ups

<b>EPD Data Type</b>	This EPD is based on product specific information.	
<b>Product Name 1</b>	Structural steel hollow sections	
<b>Product Description 1</b>	<p>Steel hollow sections (e.g., circular, rectangular, or square tubes) are characterized by their closed, hollow cross-sections. Their functional range includes:</p> <ul style="list-style-type: none"> <li>- Structural Efficiency: High strength-to-weight ratio, ideal for lightweight yet robust frameworks in construction (e.g., roofing, bridges, and trusses).</li> <li>- Torsional Resistance: Superior performance under twisting forces, suitable for space frames, cantilevered structures, and machinery.</li> <li>- Aesthetic Flexibility: Smooth, continuous profiles are favored in architectural applications (e.g., exposed façades, modern staircases, and sculptural elements).</li> <li>- Utility Integration: Hollow cores allow routing of electrical, plumbing, or HVAC systems in buildings.</li> <li>- Modularity: Prefabricated uniformity supports rapid assembly in modular construction and scaffolding.</li> </ul>	
<b>Product Name 2</b>	Structural steel built ups	
<b>Product Description 2</b>	<p>Built-up sections are custom-engineered by combining standard steel components (e.g., plates, I-beams, channels) via welding or bolting. Their functional range includes:</p> <ul style="list-style-type: none"> <li>- Heavy Load Capacity: Tailored to bear extreme loads in large-span structures (e.g., crane girders, industrial warehouses, and bridge girders).</li> <li>- Design Customization: Adaptability to unique geometric or load requirements, such as irregular column shapes or seismic-resistant frames.</li> <li>- Composite Applications: Integration with concrete or other materials for hybrid systems (e.g., high-rise cores, composite beams).</li> <li>- Cost-Effective Scalability: Optimized material use for large-scale projects (e.g., transmission towers, wind turbine bases, and shipbuilding).</li> <li>- Ductility and Resilience: Enhanced energy absorption in dynamic or seismic environments, critical for infrastructure in hazard-prone regions.</li> </ul>	
<b>Production Site</b>	Jiangyin, Jiangsu, China	
<b>Product Performance and</b>	<b>Standard</b>	<b>Result</b>
	EN10219, EN10210	Available on request
	BS1387, JISG3466, DIN2240	

<b>Standard Compliance</b>	ASTM A500, ASTM A501, AS1163		
<b>Product Grade</b>	<p>Chinese grade:</p> <ul style="list-style-type: none"> <li>● Q235GJB/C/D</li> <li>● Q345GJC/D/E, Q345B &amp; Q345GJB</li> <li>● Q390GJC/D/E</li> <li>● Q420GJC/D/E</li> <li>● Q460GJE/D/E</li> </ul> <p>Japanese grade:</p> <ul style="list-style-type: none"> <li>● SS490 and SS400</li> </ul> <p>American grade:</p> <ul style="list-style-type: none"> <li>● A500 Grade A/B/C/D</li> <li>● A501 Grade A/B/C/D</li> </ul> <p>Australia grade:</p> <ul style="list-style-type: none"> <li>● C350LO/C450LO</li> </ul>	<p>EN grade:</p> <ul style="list-style-type: none"> <li>● S235JRH/JOH/J2H</li> <li>● S275JRH/JOH/J2H, S275NH</li> <li>● S355JRH/JOH/J2H, S355NH</li> <li>● S420JOH</li> <li>● S460NH/S460JOH</li> </ul>	
<b>Candidate List of Substances of Very High Concern for Authorisation</b>	Product does not contain substances on the “Candidate List of Substances of Very High Concern for authorisation” (2) that require registration.		
<b>Materials</b>	<b>Material</b>	<b>Function</b>	
	Hot rolled coils	Structure	
	Hot rolled plates	Structure	
	Welding wire	Welding	
	Welding flux	Welding	
	Steel belt	Packaging	
<b>Content declaration</b>	Elements	Total mass percentage(%)	CAS Number
	Fe	>95.0	7439-89-6
	Al	≤0.1	7429-90-5
	Cu	≤0.6	7440-50-8
	Mn	≤1.8	7439-96-5
	Si	≤2.0	7440-21-3

### 3 LCA Description and Rules

<b>EPD Type</b>	Cradle-to-gate (A1-A3) with modules C1-C4 and module D See Figure 2: Modules Included
<b>Functional/Declared Unit</b>	The declared unit is production of 1 tonne Structural steel hollow sections or Structural built ups (mass excluding packaging).
<b>Reference Service Life (RSL)</b>	According to the producer, reference service life is not available.
<b>Application of Cut-Off Criteria</b>	According to PCR, the definition of cut-off criteria allows some data from the inventory to be disregarded when such data is considered irrelevant for the purposes of the study and would only represent an unnecessary burden in collecting data, without significantly altering the end result. Except for the exclusions listed in the PCR, no other specific cut-off criteria is applied. In this study, all the input and output are included, no cut-off applied.
<b>Allocations</b>	<p><u>Allocation of input</u></p> <p>Allocation of input is based on physical properties and is based on weight.</p> <p><u>Allocation of co-products</u></p> <p>According to PCR, The steel scrap originating from Module A1-A3 should be considered as co-product to be removed from the product system through co-product allocation. In this study, the amount of scrap iron is only 0.008% of the finished product, so it is directly ignored.</p> <p><u>Allocation of waste</u></p> <p>The allocation strategy for the waste per PCR follows the same strategy listed in the EN15804+A2. Thus, the “cut-off” strategy is applied. This scenario allocates the entire environmental impacts of waste treatment procedures (from deconstruction to the waste processing) to the producer. The recycled materials, on the other hand, are burden-free. An important note is that when materials have reached a so-called “end-of-waste” state, the coverage of the waste processing is thus terminated. Any inputs/flows related to refine gross recycled materials for actual applications are beyond the product system boundary.</p>
<b>Data Collection Period</b>	2022.11-2023.11
<b>Applied Software</b>	SimaPro 9.5.0.0
<b>Applied Background Database</b>	Ecoinvent 3.9.1
<b>Data Quality Assessment</b>	See Figure 4 Data quality requirement and assessment
<b>Applied Energy Datasets</b>	Electricity, medium voltage {CN-ECGC}   market for electricity, medium voltage   Cut-off, U
<b>Applied Electricity Mix Carbon Footprint</b>	[0.852 kg CO <sub>2</sub> e/kWh.]

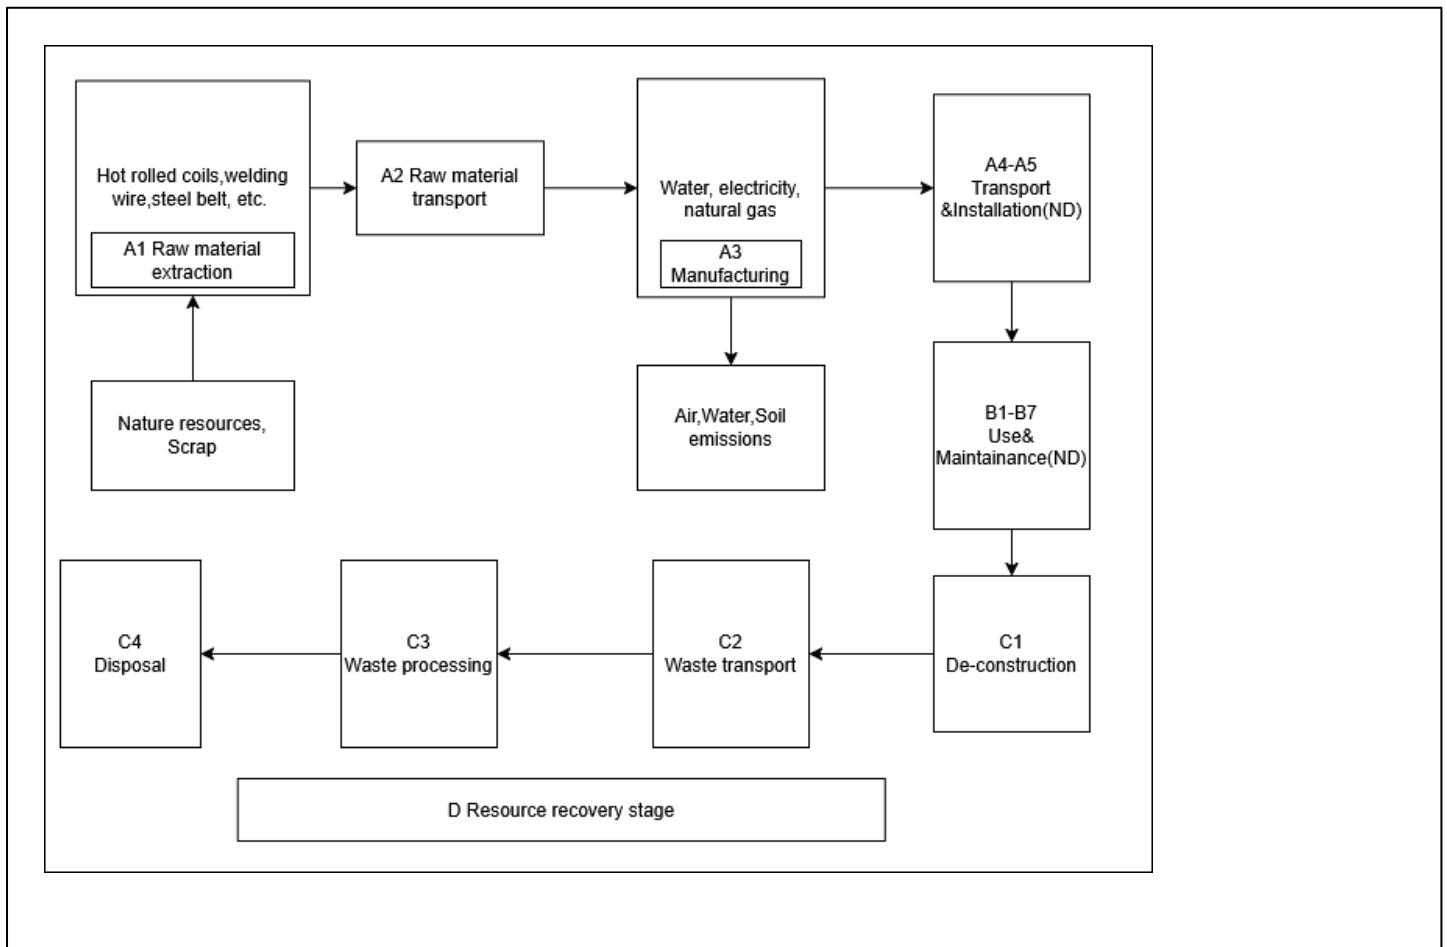

Figure 5: Manufacturing Processes

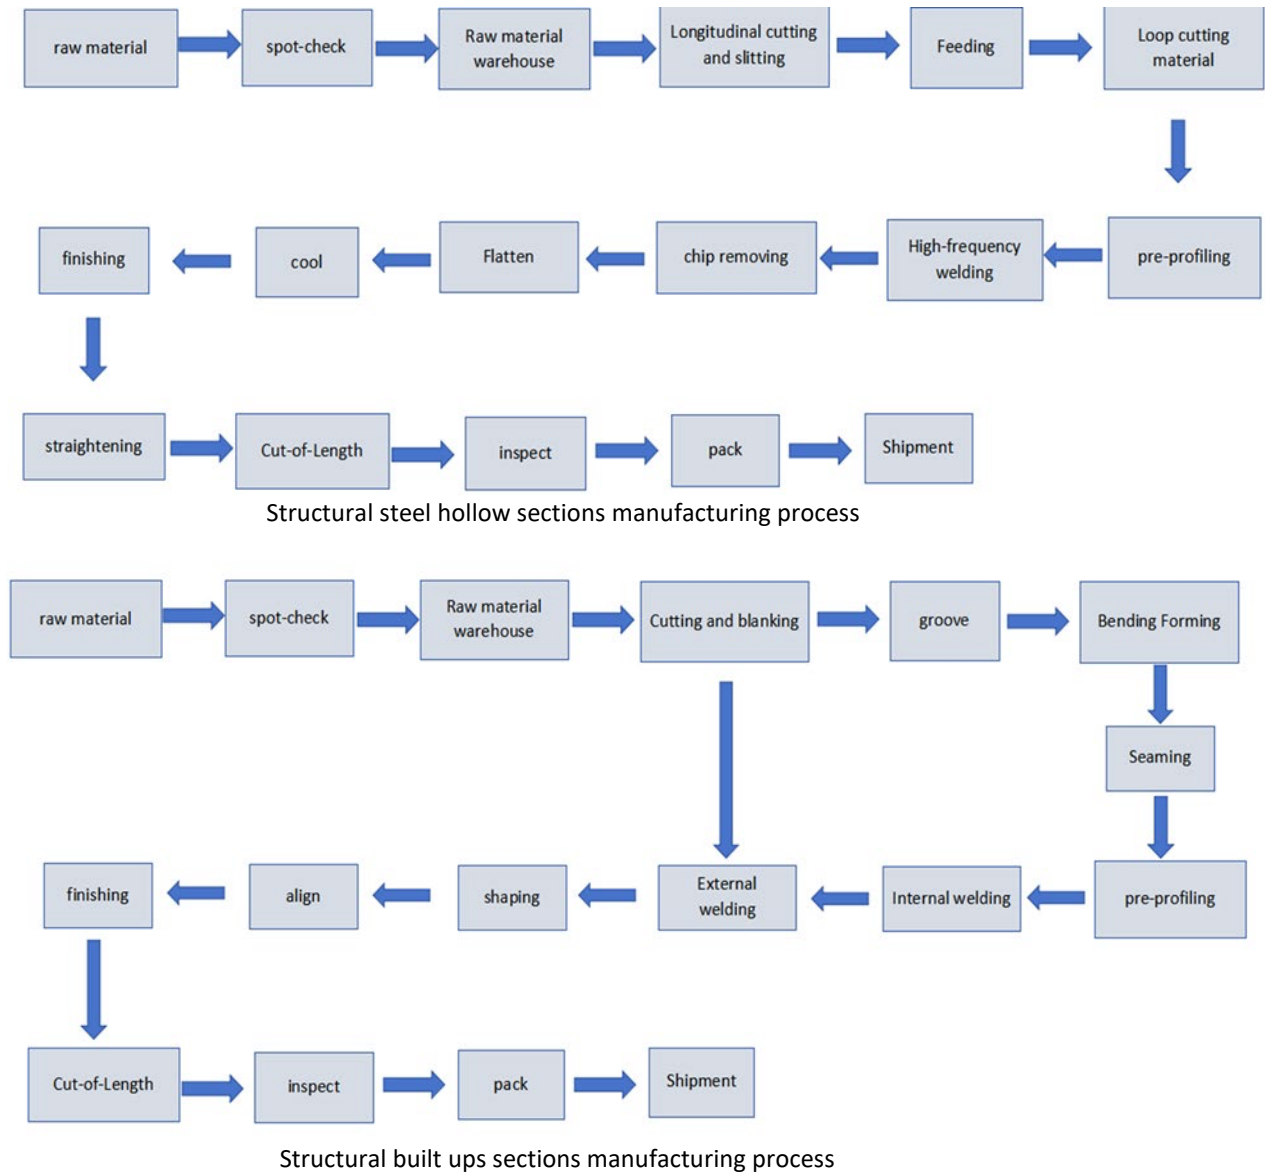

Figure 6: Data quality requirement and assessment

Quality requirement	Specific requirement	Data quality applied in this LCA	Result Met/not met
Time-related coverage (age of data and the minimum length of time over which data should be collected)	Generic datasets should be within ten years	Ecoinvent 3.9.1, <10 years	Met
	Newly collected LCI data were current or up to 5 years old and based on a 1-year average	2022.11-2023.11 production inventory	Met
Geographical coverage (the geographical area from which data for unit processes should be collected to satisfy the goal of the study):	Geographic coverage shall reflect the operational reality of the different life cycle stages;	All raw material data was collected from the manufacturer in China; Production data was collected and provided by Jiangyin Jianhe Steel Co.Ltd.	Met

Quality requirement	Specific requirement	Data quality applied in this LCA	Result  Met/not met
		<p>EoL stage are based on their respective geographical regions. The specific applied scenarios are supplied by Jiangyin Jianhe Steel Co.Ltd, which is deemed to be representative.</p>	Met
		<p>Transportation and energy use data referring to Ecoinvent data with geographical coverage corresponding to the location.</p>	Met
Technology Coverage	Specific technology or technology mix	<p>For the most part, data are representative of the actual technologies used for processing, transportation, and manufacturing operations. Representative fabrication datasets, specific to the type of material, are used to represent the actual processes, as appropriate.</p>	Met
Precision	Measure of the variability of the data values for each data expressed	<p>Data collected for operations were typically averaged for one or more years over multiple operations, which is expected to reduce the variability of results.</p>	Met
Completeness	95% percentage of flow is measured or estimated	<p>All of the unit processes within the scope of the life cycle were included, with less than a 1% cut-off</p>	Met
Representativeness	Qualitative assessment of the degree to which the data set reflects the actual population of interest, i.e., geographical coverage, period, and technology coverage	<p>See geographical coverage, period, and technology coverage requirement above. These requirements are met.</p>	Met
Consistency	Qualitative assessment of Whether the study methodology is applied uniformly to the various components of the analysis	<p>The study methodology is applied uniformly to the different parts of the analysis.</p>	Met
Reproducibility	Qualitative assessment of the extent to which information about the methodology and data values would allow an independent practitioner to reproduce the results reported in the study	<p>Based on the description of data and assumptions used, this assessment would be reproducible by other practitioners. All assumptions, models, and data sources are documents.</p>	Met
Sources of the data	The foreground data should be from the primary producer	<p>Data representing energy use at Chinese factories represent an annual average and are considered of high quality due to the length of time over which these data are collected. For secondary LCI</p>	Met

Quality requirement	Specific requirement	Data quality applied in this LCA	Result  Met/not met
		datasets, Ecoinvent v3.9.1 are used.	
Uncertainty of the information	Data, models, and assumptions should be verified	All the primary data and assumptions were confirmed with Jiangyin Jianhe Steel Co.Ltd, and models were built following ISO 14040/44 and PCR requirements.	Met

## 4 Scenarios and Additional Technical Information

The results have been calculated based on the below information.

Module	Scenario and Additional Technical Information
<b>A1-A3</b>	In A3, after manufacturing, the steel scrap waste is sold to other vendors for recycling.
<b>C1</b>	No material and energy use for C1.
<b>C2</b>	For module C2, the assumption has been made that the waste product would be transported for 50 km by truck.
<b>C3</b>	Due to waste going directly to landfill or recycling, there is no need for any waste processing (C3).
<b>C4</b>	For module C4, the 15% of the rest of the waste product would be sent to C4 for landfill, and 85% to recycling according to the worldsteel data (Worldsteel association, 2017).
<b>D</b>	The benefit of steel recycling calculated according to Life cycle assessment methodology report (Worldsteel association, 2017).

## 5 LCA Results – Definitions and Disclaimers

All results have been calculated and displayed as per EN15804. Units Methods and Anonyms are defined below. Results are reported in scientific notation.

Figure 7:Core Indicators

Impact Category	Indicator	Acronym	Unit
Climate change – total	Global Warming Potential total	GWP-total	kg CO <sub>2</sub> eq.
Climate change - fossil	Global Warming Potential fossil fuels	GWP-fossil	kg CO <sub>2</sub> eq.
Climate change - biogenic	Global Warming Potential biogenic	GWP-biogenic	kg CO <sub>2</sub> eq.
Climate change - land use and land use change	Global Warming Potential land use and land use change	GWP-luluc	kg CO <sub>2</sub> eq.
Ozone Depletion	Depletion potential of the stratospheric ozone layer	ODP	kg CFC 11 eq.
Acidification	Acidification potential, Accumulated Exceedance	AP	mol H <sup>+</sup> eq.
Eutrophication aquatic freshwater	Eutrophication potential, fraction of nutrients reaching freshwater end compartment	EP-freshwater	kg PO <sub>4</sub> eq.
Eutrophication aquatic marine	Eutrophication potential, fraction of nutrients reaching freshwater end compartment	EP-marine	kg N eq.
Eutrophication terrestrial	Eutrophication potential, Accumulated Exceedance	EP-terrestrial	mol N eq.
Photochemical ozone formation	Formation potential of tropospheric ozone	POCP	kg NMVOC eq.
Depletion of abiotic resources – minerals and metals <sup>2</sup>	Abiotic depletion potential for non-fossil resources	ADP-minerals&metals	kg Sb eq.
Depletion of abiotic resources - fossil fuels <sup>2</sup>	Abiotic depletion potential for fossil resources	ADP-fossil	MJ, net calorific value
Water use <sup>2</sup>	Water (user) deprivation potential, deprivation- weighted water consumption	WDP	m <sup>3</sup> world eq. deprived

Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

Figure 8: Additional Indicators

Impact category	Indicator	Acronym	Unit
Particulate matter emissions	Potential incidence of disease due to PM emissions	PM	Disease incidence
Ionising radiation, human health <sup>1</sup>	Potential Human exposure efficiency relative to U235	IRP	kBq U235 eq.
Ecotoxicity (freshwater) <sup>2</sup>	Potential Comparative Toxic Unit for ecosystems	ETP-fw	CTUe
Human toxicity, cancer effects <sup>2</sup>	Potential Comparative Toxic Unit for humans	HTP-c	CTUh
Human toxicity, non- cancer effects <sup>2</sup>	Potential Comparative Toxic Unit for humans	HTP-nc	CTUh
Land use related impacts / soil quality <sup>2</sup>	Potential Soil quality index	SQP	dimensionless
<p>Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.</p>			
<p>Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.</p>			

Figure 9: Resource Use, Waste and Output Flow Parameters

Parameter	Acronym	Unit
Use of renewable primary energy excluding renewable primary energy resources used as raw materials	PERE	MJ, net calorific value
Use of renewable primary energy resources used as raw materials	PERM	MJ, net calorific value
Total use of renewable primary energy resources (primary energy and primary energy resources used as raw materials)	PERT	MJ, net calorific value
Use of non-renewable primary energy excluding non-renewable primary energy resources used as raw materials	PENRE	MJ, net calorific value
Use of non-renewable primary energy resources used as raw materials	PENRM	MJ, net calorific value
Total use of non-renewable primary energy resources (primary energy and primary energy resources used as raw materials)	PENRT	MJ, net calorific value
Use of secondary material	SM	kg
Use of renewable secondary fuels	RSF	MJ, net calorific value
Use of non-renewable secondary fuels	NRSF	MJ, net calorific value
Net use of fresh water	FW	m <sup>3</sup>
Hazardous waste disposed	HWD	kg
Non-hazardous waste disposed	NHWD	kg
Radioactive waste disposed	RWD	kg
Components for re-use	CRU	kg
Materials for recycling	MFR	kg
Materials for energy recovery	MER	kg
Exported energy	EE	MJ per energy carrier

## 6 LCA Results

For more information about indicators see Section 0

LCA Results – Definitions and Disclaimers

Statement 1: the estimated impact results are only relative statements which do not indicate the end points of the impact categories, exceeding threshold values, safety margins or risks.

Statement 2: the result of ADP-minerals&metals and ADP-fossil shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

Statement 3: The LCI result are calculating based on activity data from Simapro software and published EPD.

## 7 Interpretation

The contribution results of the process and main life cycle stages are demonstrated in Figure 16-17.

For the steel hollow product, it can be concluded that, the production stage is the dominant source of the environmental impacts among various life cycle stages. The production stage A1 accounts for 95% of the total life cycle GWP impacts as well as 95% of the total fossil resource use. The high impact intensity of the production stage indicates that the use of materials for the steel hollow product is relatively significant.

Figure 17: Life cycle impact contribution analysis- Structural steel hollow sections

For the steel structural built-up product, it can be concluded that, the production stage is the dominant source of the environmental impacts among various life cycle stages. The production stage A1 accounts for 95% of the total life cycle GWP impacts as well as 95% of the total fossil resource use. The high impact intensity of the production stage indicates that the use of materials for the Structural built ups product is relatively significant.
