

| ASFI domain & priority | How Global GreenTag already delivers |
|---|--|
| Emissions reduction & climate resilience (Action Area 3, Priority 3.1) | LCARate™ and Environmental Product Declarations (EPDs) quantify cradle-to-grave GHG impacts to ISO 14025/EN 15804, providing auditable data for climate-disclosure filings and transition finance instruments. |
| Nature protection & restoration (Action Area 3, Priority 3.3) | NaturePositive+ Standard & Declaration™ measure net-nature benefits—covering biodiversity, circularity and ecosystem services—aligning with the Plan’s ambition to mobilise capital for nature-positive outcomes. |
| Transparent product labelling (Action Area 1, Priority 1.5) | GreenRate™ gives an at-a-glance tiered label recognised by major green-building tools and soon to be digitally linked to the Australian taxonomy. |
| Health & social inclusion (Action Area 7, Priority 7.2) | Product Health Declaration (PHD)™ rates ingredient toxicity and supports healthier, more inclusive spaces—an essential metric for lenders issuing sustainability-linked loans tied to occupant wellbeing. |
| First Nations & ethical supply chains (Action Area 7, Priority 7.3) | Every Global GreenTag assessment screens modern-slavery and Indigenous-rights risks, providing assurance for financiers that must comply with ASFI’s First Nations economic-self-determination objectives. |
| Capability building & disclosure (Action Area 7, Priority 7.1) | GreenTag’s Product Passport API makes certified data machine-readable for ESG data platforms, easing the reporting burden the Action Plan identifies. |
