Global GreenTag International Pty Ltd

RC²D™

Recycled Content & Circularity Declaration

Making Circular Product Performance Clear. Credible. Verifiable.

One independently verified GreenTag Certification and TAG™ that brings together recycled content, ratings, circularity performance and transparent supply chain information.

Declare recycled contents. Demonstrate circularity. Build market confidence.

The **Global GreenTag Recycled Content + Circularity Declaration (RC²D™)** helps manufacturers demonstrate verified recycled content and measurable circular economy performance through a single, independently verified and rating tool recognised Global GreenTag TAG™ and Certificate.

Designed to support:

Green Star® Circularity credit requirements requirements
WBCSD Circular Transition Indicators (CTI)
Australian Government Recycled Content Traceability Framework

Verified Circular Product Performance - at a glance.

The Global GreenTag RC²D™
~ Bringing Recycled Content and Circularity Together

Today's market increasingly needs more than a statement that a product "contains recycled content or a simplistic symbol". Manufacturers are being asked to provide credible evidence of how much recycled content a product contains, where that material has come from, how it has been traced and how the product performs more broadly within a circular economy.

The **RC2D (Recycled Content & Circularity) Standard is a science-based product certification framework** that recognises and rewards the use of recycled material in manufactured products across construction, interior fitout and consumer product categories.

RC²D™ Recycled Content Rating Levels

BronzeRECYCLED™
Good

SilverRECYCLED™
Very Good

GoldRECYCLED™
Excellent

PlatinumRECYCLED™
World Leading

RC²D™ responds by transforming complex circularity assessment into practical product information that can be more readily understood and applied:

For manufacturers:

A credible way to demonstrate and market verified circular product performance and gain Green Star 'Circularity' credit recognition in Building and Fitout rating tools.

For architects + designers

Clear information to help identify products supporting circular design and project certification and specification objectives.

For procurement professionals

Consistent, independently verified information to support purchasing and tender conditions and award decisions.

For sustainability teams

Evidence-based recycled content and circularity information that can contribute to sustainability and ESG reporting and project certification.

Information on the RC²D TAGs:

Tiered Rating Levels ~ based on 'weighted recycled content averages', providing designers, specifiers and procurement professionals with an immediate indication of verified recycled content performance.

Circularity Score ~ calculated using the WBCSD Circular Transition Indicators (CTI) methodology, assessing circularity of material, water and energy flows entering and leaving a defined product system boundary.

One Declaration. Multiple Measures of Circularity.

Every RC²D™ Declaration brings together key circular product metrics within one independently certified assessment.

Recycled Content Rating
A clear rating communicates the product's verified recycled content and recognises different forms of circular material use, including pre-consumer recycled content, post-consumer recycled content, refurbished/repaired and reused items and components.

RC²D™ Recycled Content Rating Levels: BronzeRECYCLED™, SilverRECYCLED™, GoldRECYCLED™ & PlatinumRECYCLED™
The tiered rating provides designers, specifiers and procurement professionals with an immediate indication of verified recycled content performance—helping make product selection faster and simpler. Rating tier levels are based on 'weighted recycled content averages'.

At a glance, the RC²D Rating + CTI Score provide a picture of circular product performance.

Circular Transition Indicators ~ CTI Score

RC²D™ incorporates a Green Star® incorporated World Business Council for Sustainable Development (WBCSD) Circular Transition Indicator (CTI)- Circularity Score, enabling broader circular performance to be communicated alongside recycled content with direct credit relevance. Together, the RC²D Rating + CTI Score provide an at-a-glance picture of circular product performance.

1. RC²D™ Rating Level
Shows the verified recycled content rating at a glance.

2. Recycled Content Metrics
Clearly communicates verified recyclate content, types and recognised circular material and process input/s.

3. Circularity Performance
Integrates recycled content with broader circularity process indicators rather than presenting recyclate percentage in isolation.

4. CTI Circularity Score
Provides a Green Star® and WBCSD CTI-compliant measure of circular performance.

5. Independent Verification
Assessment and evidence requirements provide increased confidence that recycled content claims are credible and substantiated.

6. Traceability
Methodology aligned with the Australian Government's Recycled Content Traceability Framework and related Standard/s.

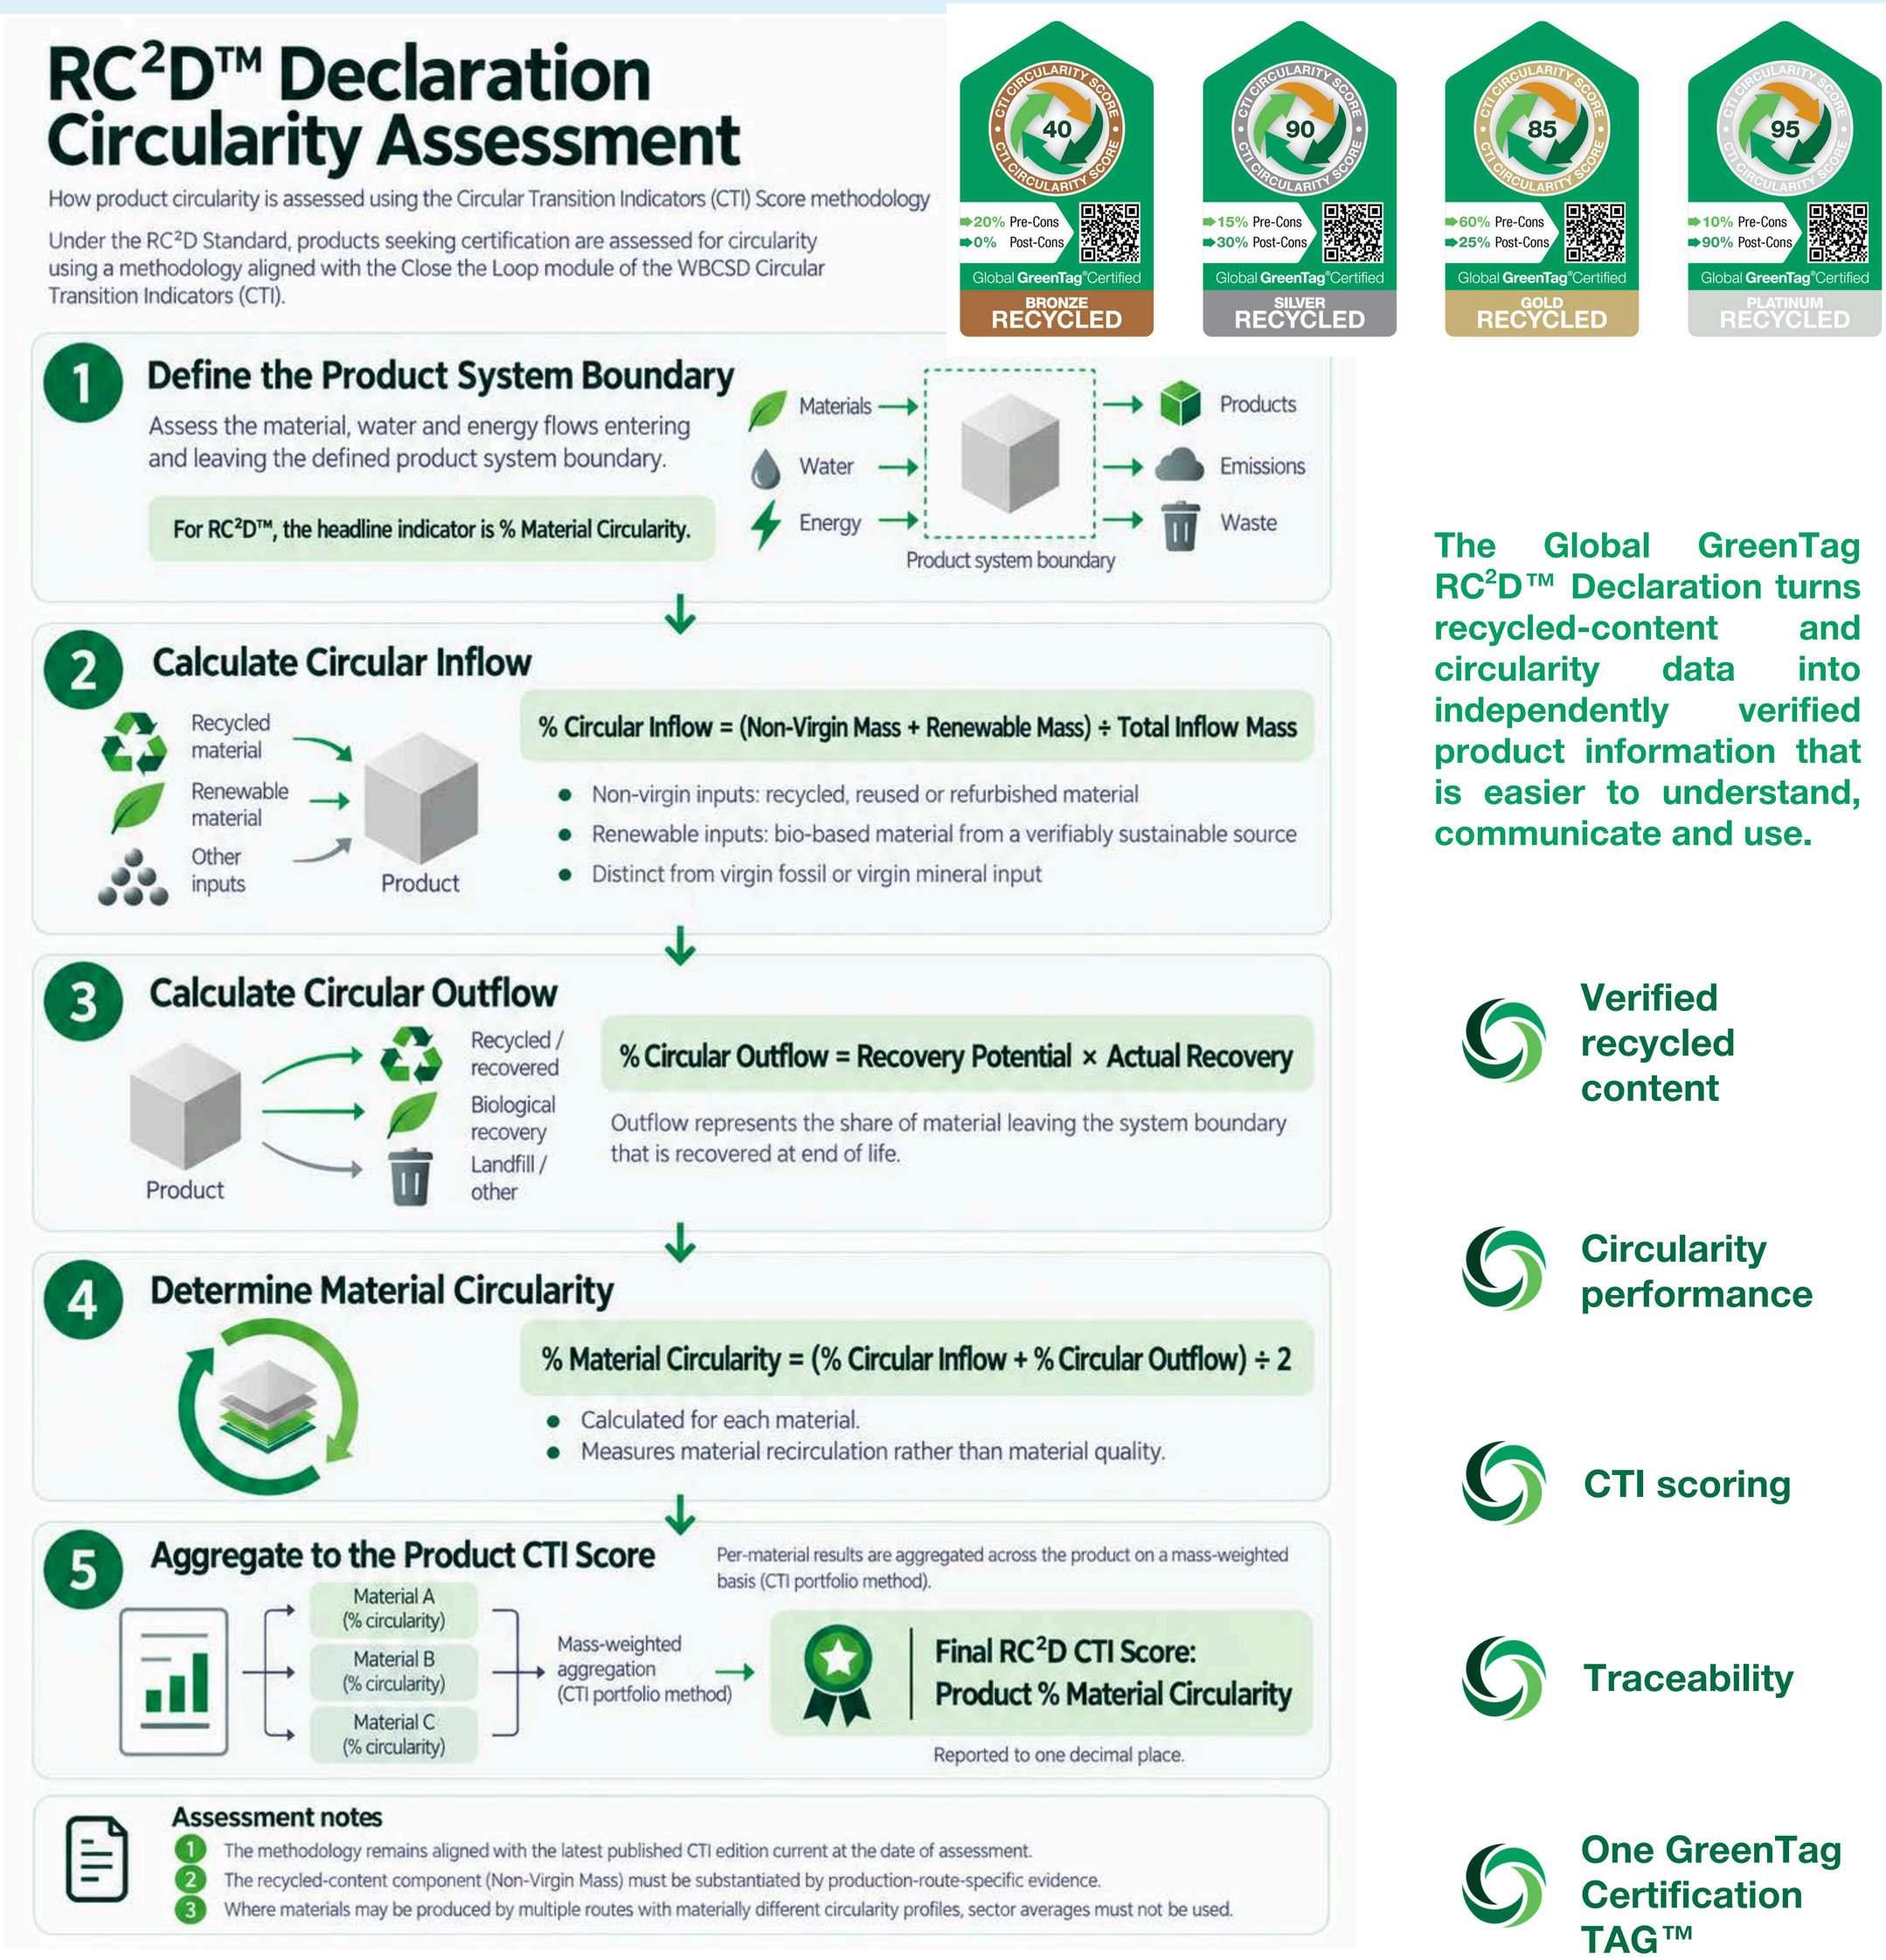

7. One GreenTag Certification TAG™
Recycled content and circularity performance are integrated into one consistent label format and Certificate.

8. Embedded QR Code
Connects directly to the product's GreenTag Product Assessment Report on GlobalGreenTag.com, providing readyaccess to supporting assessment information.

Supporting Green Star® + Circular Procurement

RC²D™ has been tailored to support requirements of the **Australian Government Recycled Content Traceability Framework** and the Green Building Council of Australia's **Green Star® 'Building' and 'Fitouts' rating tool Circularity credits,** by incorporating **WBCSD's Circular Transition Indicators**.

Recycled Content & Circularity Declaration

The Global GreenTag RC²D™ Declaration turns recycled-content and circularity data into independently verified product information that is easier to understand, communicate and use.

- **Verified recycled content**
- **Circularity performance**
- **CTI scoring**
- **Traceability**
- **One GreenTag Certification TAG™**

ONE TAG. CLEARER CIRCULARITY. GREATER CONFIDENCE.
